CoolMax Fuel Cooling Tank

The design uses the dry ice or ice to cool the fuel down before it gets to the engine. Meaning not only more power, but more consistant runs by removing the variable of heat in the fuel. Keeping the fuel cool can be a challenge with some engine combinations.

CoolMax Fuel Cooling Tank - use Ice, Dry Ice, Custom Solutions.

EMOTION COILOVER

24-level Damping Force Adjustment System (Compression & Rebound Together)

Uses 24-level adjustment system (compression & rebound together), and brand new needle value design, which has a fine reputation. So that the absorb of shock in each level will more linear. In order to achieve the setting that exhibits the best performance not only in street but also in winding road without compromising ride comfort.

Pillow Ball Upper Mounts

Emotion utilizes various designs of upper mounts to increase steering response while still maintaining quiet operation. Also the pillow ball upper mount can adjust the camber angle.

Mono-Tube Structure

For fine control of the machine and aggressive detailed communication with the road surface can use of mono-tube generates linear damping force, which reacts to even a tiniest input from the road surface, and stable damping force, which can be well maintained even for intensive circuit run.

Strength Spring

Form by silicone chrome steals and the straight material, the spring performance will not turn down after violent control.

Full-Length Ride Height Adjustment System

Full-length adjustment system with the use of movable lower bracket allows for separate adjustment of ride height and pre-load. Bump to re-bump stroke ratio would not be affected if ride height is adjusted only by the use of lower bracket.

Seamless Steel Body Tube

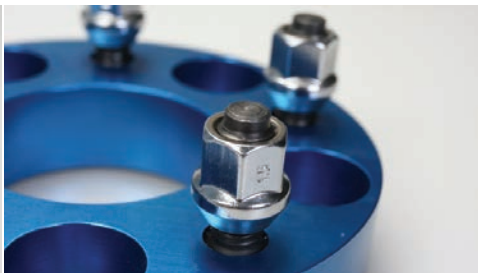

JIS G3355-STKM13C(DIN2393-ST44-2) 52mm carbon seamless steel mono-tube structure 44mm linear characteristic internal piston. Light weight, better heat improvement, oil amount and piston area increase. Enhance Damper performance.
